Professional Summary

AWS Certified Solutions Architect Associate (SAA-C03, score 790/1000) with hands-on experience designing and deploying production-style serverless and containerised cloud infrastructure on AWS. Proficient in infrastructure as code (Terraform), CI/CD automation (GitHub Actions), containerisation (Docker), and configuration management (Ansible). Holds the Google Cybersecurity Professional Certificate. Seeking a junior Cloud Engineer or DevOps Engineer role with a long-term focus on cloud security.

Technical Skills

Cloud Platforms: AWS (EC2, VPC, IAM, S3, RDS, Lambda, CloudFront, API Gateway, Route 53, ECS, DynamoDB, ElastiCache, SQS, SNS, SES, CloudWatch, Auto Scaling, ALB/NLB, EBS, EFS, KMS, CloudTrail)

Infrastructure as Code: Terraform (EC2 provisioning, IAM roles, security groups, S3 remote backend, DynamoDB state locking, VPC configuration)

CI/CD & Containers: GitHub Actions (multi-stage pipelines, trigger-on-push workflows), Docker (image creation, Dockerfile authoring), Docker Compose (multi-service orchestration)

Config & Monitoring: Ansible (playbook-based server configuration and application deployment), Prometheus, Grafana, CloudWatch Logs and Alarms

Networking & Security: VPC design, subnets, NAT gateways, security groups, NACLs, OAC, least-privilege IAM, KMS encryption, CloudTrail audit logging, TCP/IP, DNS, HTTP/HTTPS, SSH

Programming & Scripting: Python (automation scripting, `os.environ`, `subprocess.run`, Lambda backend development), Bash (Linux Administration coursework)

Version Control & OS: Git, GitHub, Linux — Ubuntu and WSL (command line, file permissions, process management, SSH)

Projects

Serverless Portfolio Website on AWS *S3 · CloudFront · API Gateway · Lambda · DynamoDB · SES · IAM · CloudWatch*

Live: d343tuwzgee0su.cloudfront.net | GitHub: github.com/alankunjumon/aws-portfolio

- Designed and deployed a production-style serverless portfolio on AWS — static frontend hosted on a private S3 bucket served globally via CloudFront with Origin Access Control (OAC), ensuring S3 is never directly accessible from the internet.
- Built a REST API backend using API Gateway and AWS Lambda (Python) to process contact form submissions — Lambda validates input, stores messages in DynamoDB, and triggers real-time email notifications via Amazon SES.
- Configured CloudFront with multiple origins and path-based routing (`/api/*` to API Gateway, default to S3), enabling both static content delivery and dynamic API requests through a single HTTPS endpoint.
- Implemented IAM least-privilege execution role for Lambda (DynamoDB PutItem, SES SendEmail, CloudWatch Logs only), KMS encryption on DynamoDB, and CloudWatch alarms for Lambda error monitoring.

Automated CI/CD Pipeline for Cloud Deployment *GitHub Actions · Docker · Terraform · Ansible · AWS EC2 · Prometheus · Grafana*

GitHub: github.com/alankunjumon/py-deploy

- Designed and implemented an end-to-end CI/CD pipeline triggered on code pushes using GitHub Actions — covering build, test, and deploy stages with fail-fast validation checks at each stage.
- Provisioned AWS infrastructure using Terraform including EC2 instances, IAM roles, security groups, VPC configuration, and remote state management with S3 backend and DynamoDB state locking.
- Containerised a Python web application using Docker and Docker Compose for multi-service orchestration; automated server configuration and deployment using Ansible playbooks; configured Prometheus and Grafana for real-time monitoring.

Education

Bachelor of Computer Applications (BCA)

School of Technology and Applied Science, Mahatma Gandhi University, Kottayam

Relevant Coursework: Cloud Computing, Linux Administration, Computer Networks
